

[G] Pyramid

Karli, age 5, is fond of drawing pyramids.

Fascinate her by writing her a program that automatically draws the pyramids for her.

Input Format (input: **pyrami d. i n**)

Input begins with an integer **N**, where $1 \leq N \leq 100$, indicating the number of pyramids to be drawn.

Followed by **N** cases in the format: **height symbol**

where $3 \leq \text{height} \leq 100$, the height of the pyramid
symbol, the character to be used in drawing the pyramid.

Output Format (output: **standard output**)

Draw a pyramid using character **C** with the designated height **N**.

If input is invalid, display "cannot draw".

Sample Input

```
3
5 *
2 @
3 n
```

Sample Output

```
  *
 * *
* * *
* * * *
* * * * *
```

cannot draw

```
  n
 n n
n n n
```
