[A]   Part-Time Job

On your search for online part-time jobs, you have found an outsourcing company looking for people they can pay to reformat various documents -- convert small letters to capital letters, and vice-versa.

Quite trivial with a program, right?

Note: Solution must contain a function for displaying the converted string. The function takes a *string* as an argument and returns a *string* – the text with the necessary conversions.

Hint: isalpha, isalnum, isupper, islower, toupper, tolower

Input Format (input: `job.in`)
Input file contains several lines of text.

Output Format (output: `standard output`)
Output text with all lowercase characters converted to uppercase, and vice-versa.

Sample Input
```
iF GETTING CLOSER WITH ANYONE WOULD ONLY BRINGS pain IN THE
END,
tHAN i SHOULD MAKE A DISTANCE WITH anyone AND BUILD A
thick brick wall
FROM WHOEVER TRYING TO GET CLOSER.

```

Sample Output
```
If getting closer with anyone would only brings PAIN in the
end,
Than I should make a distance with ANYONE and build a
THICK BRICK WALL
from whoever trying to get closer.
